# Installing Linux x86

## Prerequisites

Redhat based Linux operating system:

- RedHat
- CentOS
- Fedora
- Oracle Linux
- ClearOS

Linux dependency libraries:

- glibc.i68
- zlib.i686
- libstdc++.i686
- libssh.i686

## Download and Install Linux RPM's -TapeTrack Framework Server

The two installation packages required for TapeTrack Server for Linux are:

- Client RPM Package
- Server RPM Package

Always install the Client RPM package first, as the Server RPM package depends on files located within the Client RPM package.

**Install the Client RPM package.**

```
rpm -i
https://mirror-us.tapetrack.com/Linux-x86/tapetrack-clients-latest.i386.rpm
```

**Install the Server RPM package.**

```
rpm -i
https://mirror-us.tapetrack.com/Linux-x86/tapetrack-server-latest.i386.rpm
```

# Download and Install TapeMaster and Server Utilities

As you are installing TapeTrack on a Linux server, you will also need to download and install TapeMaster and Server Utilities on a Windows machine (with network access to the Linux server) to access and administer the TapeTrack Server.

- Download TapeMaster
- Download Server Utilities

Install both programs by double-clicking the executables and following the installation wizards.

- Installing TapeMaster
- Installing Server Utilities

# Connecting TapeMaster to the Framework Server

1. Start TapeMaster and you will be prompted to add a new connection,
2. Follow instructions to add the connection details to your server and IP or DNS
3. Login to TapeMaster to test the connection is successful, using the username `tapemaster` and leaving the password blank.
