

# Installing

## Windows

The TapeTrack Framework Server Software installs automatically via an InstallShield installer.

Locate the executable you downloaded, setup.exe, and double click to initiate the installation.

Click Next > to start the Install Shield Wizard.

After reading and agreeing to the License Agreement click I accept the terms in the

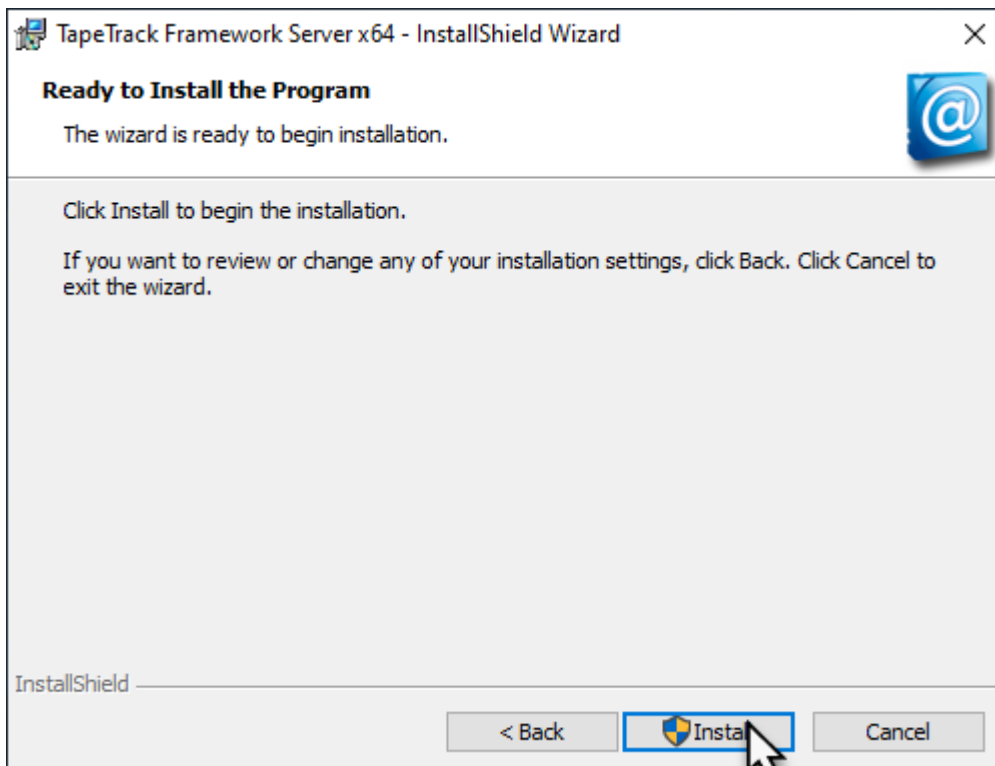

License agreement and Next > to proceed

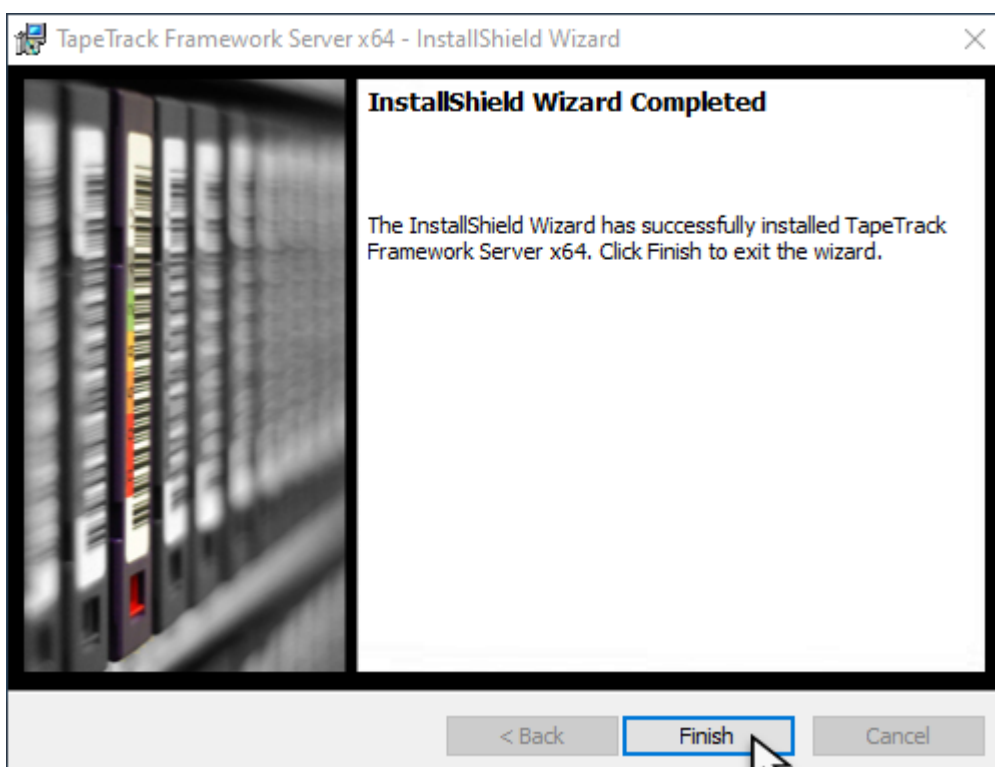

Confirm the installation directory is correct, or click Change to select another installation directory. Click Next > to proceed.

Click Install to begin the installation

Click Finish to exit the installer.

At the conclusion of the installation process, the installer will also kick-off an install of the following packages, which can optionally be installed:

- 1. TapeTrack TapeMaster
- 2. TapeTrack Server Utilities

## Linux

The TapeTrack Framework Server will be installed by the Redhat Package Manager (RPM).

An example installation command is:

Install the Client package (must be installed before the Server package).

```
rpm -i  
http://mirror-us.tapetrack.com/Linux-x86/tapetrack-clients-latest.i386.rpm
```

Install the Server package.

```
rpm -i  
http://mirror-us.tapetrack.com/Linux-x86/tapetrack-server-latest.i386.rpm
```

## Download and Install TapeMaster and Server Utilities

As you are installing TapeTrack on a Linux server, you will also need to download and install TapeMaster and Server Utilities on a Windows machine (with network access to the Linux server) to access and administer the TapeTrack Server.

Download [TapeMaster](#)

Download [Server Utilities](#)

Install both programs by double clicking the executables and following the installation wizards.

Installing [TapeMaster](#)

Installing [Server Utilities](#)
