# **Decommissioning Server Replication**

## **DB** Config File

2025/05/24 18:17

On the server that your master Framework Server is installed, navigate in Windows File Explorer to the TapeTrack Installation folder (default = C:\Program Files\TapeTrack\TapeTrack Framework Server\var\db) and open the file DB\_CONFIG with a text editor such as Notepad.

$\rightarrow$	~ 🛧 📘	🕆 🕂 🖌 Vrogram Files > TapeTrack > TapeTrack Framework Server > var > db 🗸 🗸				,○ Search db
1	Name	^	Date modified	Туре		Size

	_ <b>T</b> M	ISS10.catalog-extent	9/2/2021 11:29 AM	CATALOG-EXTENT File		
P 1	TN	ISS10.catalog-extent.dump	11/6/2021 11:12 AM	DUMP File		

## **Edit Config File**

Scroll to the bottom of the config file until you see the replication code section

```
rep_set_priority 1
repmgr_site replicant-1.tapetrack.com 5010
repmgr_site master.tapetrack.com 5010 db_local_site on db_group_creator on
```

Add a hash tag to the start of the lines of code to convert them to comments so they will be skipped when TapeTrack loads the config file.

```
#rep_set_priority 1
#repmgr_site replicant-1.tapetrack.com 5010
#repmgr_site master.tapetrack.com 5010 db_local_site on db_group_creator on
```

1/2

Depending on your system setup you may need to add write permissions to allow your user-ID to save the config file.

Save the file, ensuring that it saves as DB\_CONFIG.cfg and not .txt

#### **Restart The Server**

Follow instructions at Stop and Restart the Server, to load in the new config file details.

#### **Stop Replicant Database**

Navigate to the location of your Replicant Server installation and Stop the Server.
