Changing Connection Port

During an upgrade or migration of your TapeTrack Server you may choose to change which port the Framework communicates with the Desktop Client programs.

Changing Framework Server Port Allocation

Open the Framework Server Helper which is installed in the directory TapeTrack\TapeTrack Framework Server, (default location C:\Program Files\TapeTrack\TapeTrack Framework Server) by double clicking on the executable TMSS10ServerHelper.exe.

Change the port number in the field Port under the Options section to the required port number, in this example from port 5000 to 443.

Click Save Service Settings to update the data.

S TapeTrack Server Helper	r	
☐ Service		
Name N	TMSS10SVC	
Status	Running	
Process ID	16692	
Binary	C:\Program Files\TapeTrack\TapeTrack Framework Server\TMSS10Server.exe	
☐ Options		
Home Directory		
Port	5000	
Syslogd Server		
Enable Replication	True	
Log File Name Type	0	
Save Service	ce Settinas	
(ii		
Control Service	Update Software Edit/View Files	
Stop	Start Download and Update DB_CONFIG	\$DB_Err

Stop and then start the TapeTrack Service to allow the Framework Server to access the new port.
