

# Changing Connection Port

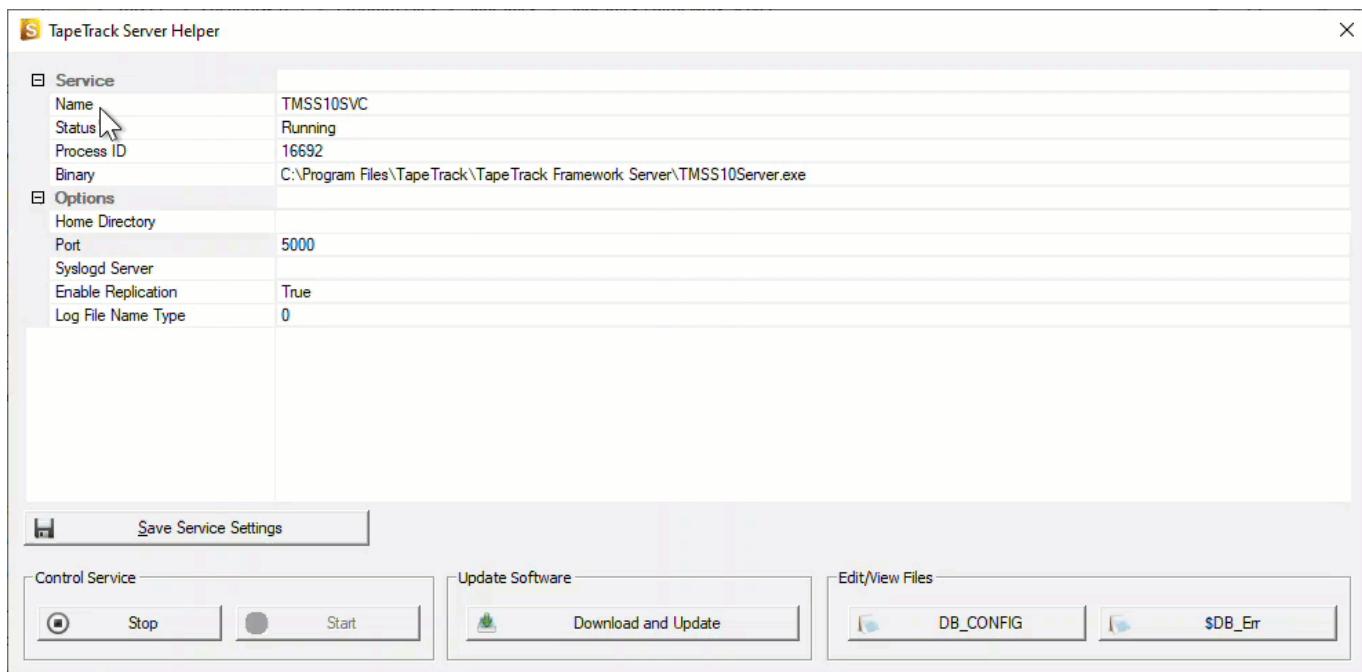

During an upgrade or migration of your TapeTrack Server you may choose to change which port the Framework communicates with the Desktop Client programs.

## Changing Port Allocation

Open the Framework Server Helper which is installed in the directory TapeTrack\TapeTrack Framework Server, (default location C:\Program Files\TapeTrack\TapeTrack Framework Server) by double clicking on the executable TMSS10ServerHelper.exe.

Change the port number in the field Port under the Options section to the required port number, in this example from port 5000 to 443.

Click Save Service Settings to update the data.

Stop and then start the TapeTrack Service to allow the Framework Server to access the new port.

S TapeTrack Server Helper

Service	
Name	TMSS10SVC
Status	Running
Process ID	16692
Binary	C:\Program Files\TapeTrack\TapeTrack Framework Server\TMSS10Server.exe
Options	
Home Directory	
Port	<b>443</b>
Syslogd Server	
Enable Replication	True
Log File Name Type	0
