

Diagnosing Command Line Utilities

All TapeTrack command line utilities have dual output streams when executed.

The stdout stream is used to pass the report or output from the utility, eg using TMSS10Inventory, the stdout stream passes the inventory report to the command prompt window, or file if the stream is redirected.

Sample Output

```

System: TapeTrack
Report ID: 100
Report Description: Inventory List
Production Time: Friday, July 04, 2025 - 13:08:27 (AUS Eastern Standard
Time)
Report Width: 164 bytes

The stderr stream is used to provide diagnostic information and error messages, eg. using TMSS10Inventory, the stderr stream has information on the program, server statistics, attributes passed for execution, log in details and any errors that have occurred.
