

# lite Configuration File

To modify Lite, open TMSLite.cfg in a plain text editor such as Notepad. TMSLite.cfg can be found in the TapeTrack/Lite install directory (default C:\Program Files\TapeTrack\TapeTrack Lite).

## Remove Slot Level Display

Locate the section **variables**

```
TMSSMaster.cfg - Notepad
File Edit Format View Help
options = {
    //
    // When exporting data to email send to the following addresses
    //
    email = [ "mailto1@tapetrack.com", "mailto2@tapetrack.com" ];

    /*
    variables = {
        TMSLEVELNAMES = "A,B,C";
    };
    */

    showparent = true;
};

defaults = {
```

Remove comment tags /\* & \*/ from above and below variables.

Change the line of code  
TMSLEVELNAMES = "A,B,C";  
to  
TMSNOLEVELSLOT = "true";

```
TMSSMaster.cfg - Notepad
File Edit Format View Help
options = {
  //
  // When exporting data to email send to the following addresses
  //
  email = [ "mailto1@tapetrack.com", "mailto2@tapetrack.com" ];

  variables = {
    TMSSNOLEVELSLOT = "true";
  };

  showparent = true;
};

defaults = {
```

and save file.

 Make sure that you have sufficient rights to save file to directory and to save as TMSS10Master.cfg and not as a text file or other file extension.

 If when opening TapeTrack Lite you receive an error - **Failed to read configuration file (TMSSLite.cfg): Line( ) - Syntax error** check the configuration file that you have used plain ASCII quotes ( " ") and not rich text quotes ( " ") and that the replaced text is correct.
