

Lite Configuration File

To modify Lite, open TMSLite.cfg in a plain text editor such as Notepad. TMSLite.cfg can be found in the TapeTrack/Lite install directory (default C:\Program Files\TapeTrack\TapeTrack Lite).

Remove Slot Level Display

Locate the section **variables**

```
TMSSMaster.cfg - Notepad
File Edit Format View Help
options = {
  //
  // When exporting data to email send to the following addresses
  //
  email = [ "mailto1@tapetrack.com", "mailto2@tapetrack.com" ];

  /*
  variables = {
    TMSLEVELNAMES = "A,B,C";
  };
  */

  showparent = true;
};

defaults = {
```

Remove comment tags /* & */ from above and below variables.

Change the line of code

TMSLEVELNAMES = "A,B,C";

to

TMSNOLEVELSLOT = "true";

```
TMSSMaster.cfg - Notepad
File Edit Format View Help
options = {
  //
  // When exporting data to email send to the following addresses
  //
  email = [ "mailto1@tapetrack.com", "mailto2@tapetrack.com" ];

  variables = {
    TMSSNOLEVELSLOT = "true";
  };

  showparent = true;
};

defaults = {
```

and save file.

 Make sure that you have sufficient rights to save file to directory and to save as TMSS10Master.cfg and not as a text file or other file extension.

 If when opening TapeTrack Lite you receive an error - **Failed to read configuration file (TMSSLite.cfg): Line() - Syntax error** check the configuration file that you have used plain ASCII quotes (" ") and not rich text quotes (" ") and that the replaced text is correct.
