Desktop Login Options

Desktop Direct Access

Users can log directly into TapeTrack Desktop programs using a correct and active TapeTrack User-ID and Password.

To login directly you will need to create a User and password using the `Group/User Administration` window.

> If a User attempts to login to TapeTrack with an incorrect password for more than five times consecutively, the User-ID will have access revoked. To regain access you will need to reset the User-ID password.

Active Directory Access

Active Directory access gives a User the ability to login using their Active Directory credentials.

For this function to be accessible the TapeTrack User-ID must match their Active Directory user name and the Active Domain details entered in their User-ID identity tab in the field `AD Domain`.

If the field `Require AD Group` is set to `False` the User may login using either their Active Domain credentials or using their TapeTrack User-ID and password. If the field `Require AD Group` is set to `True` the User can only login using their Active Domain credentials.
