Desktop Login Options

Desktop Direct Access

Users can log directly into TapeTrack Desktop programs using a correct and active TapeTrack User-ID and Password.

To login directly you will need to create a User and password using the `Group/User Administration` window.
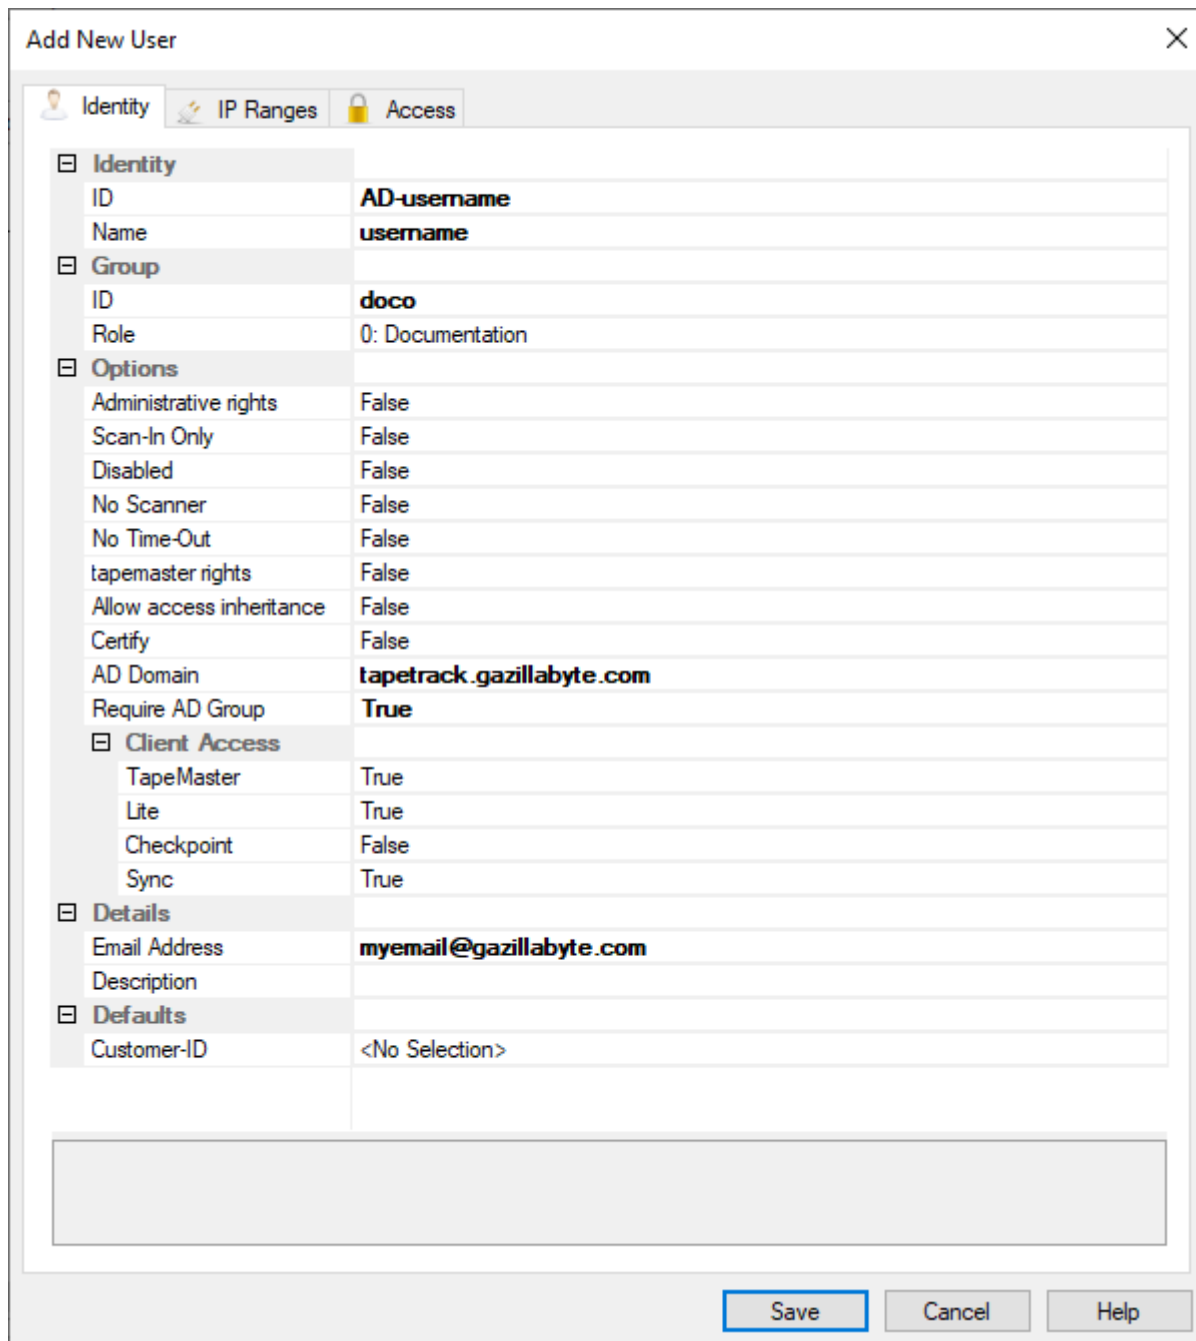

> If a User attempts to login to TapeTrack with an incorrect password for more than five times consecutively, the User-ID will have access revoked. To regain access you will need to reset the User-ID password.

Active Directory Access

Active Directory access gives a User the ability to login using their Active Directory credentials.

For this function to be accessible the TapeTrack User-ID must match their Active Directory user name and the Active Domain details entered in their User-ID identity tab in the field `AD Domain`.

If the field `Require AD Group` is set to `False` the User may login using either their Active Domain credentials or using their TapeTrack User-ID and password. If the field `Require AD Group` is set to `True` the User can only login using their Active Domain credentials.

Image shows sample data to illustrate where to enter the required information for Active Directory authentication. You will need to insert your information to create a successful connection.
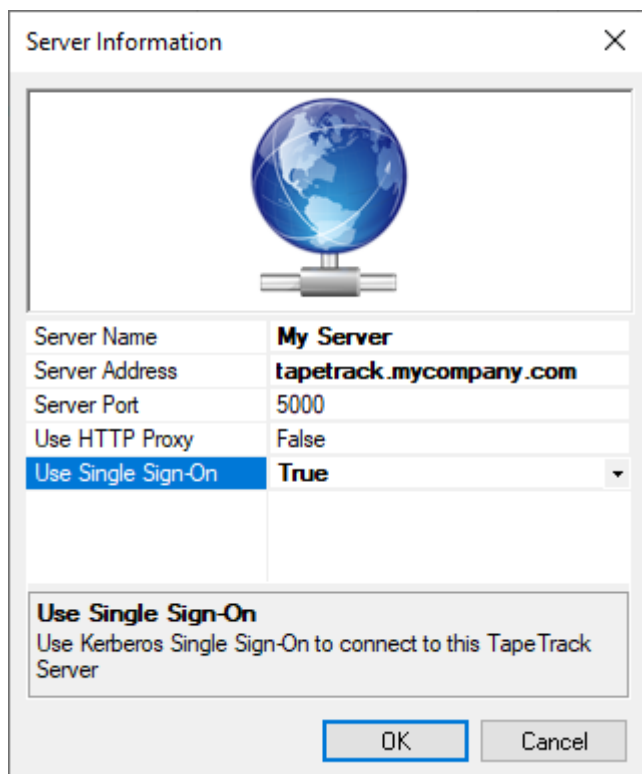

Active Directory Group Access

Kerberos Single Sign On

Having Kerberos Single Sign On enabled will allow TapeTrack to automatically authenticate the User using Windows Active Domain credentials used to login to their computer without having to login to TapeTrack individually.

To enable Kerberos Single Sign On, when setting up the connection set `Use Single-Sign-On` field to `True`.

As this function is based on a connection setup for each client computer, it can be enabled or disabled per computer as required.
