

# Moving Volumes By MoveDate

TapeTrack, using Server Utilities, can automatically move Volumes to their Next Repository when the set MoveDate comes within the scope set.

## Prerequisites

All Repositories that are included in the scope of the Volumes that will be targeted for automated must have a Next Repository set in their Properties tab in TapeMaster. This is the Repository that the Volumes will be placed in a move to.

## Identifying Volumes To Move

Executing TMSS10ExpireByDate will identify all Volumes within the scope set that qualify to be moved. Any qualifying Volumes will have a p flag added.

## Moving Volumes

Executing TMSS10MovePending will identify all Volumes, within the scope set, and place them in a move to that Repository's Next Repository.

## Creating Move Lists

Using TMSS10MoveList you can create an output file (text, Excel, CSV or PDF) of all Volumes that are currently in a Move status.

These reports can be filtered to only include the relevant information you require. They can be filtered by:

- Customer-ID
- Media-ID
- Volume-ID
- Current Repository-ID
- Target Repository-ID
- Volume Flags

If required you can also remove columns from the report that are not required, creating a cleaner report with only relevant information required, eg a picking list for Tape staff only may only require the Volume-ID and location.
