

# Restoring Database From DB\_Hotbackup Snapshot

Restoring database to a new installation.

Install TapeTrack Framework Server

Stop the service

Navigate to the backup snapshot directory and copy all files to your clipboard.

Navigate to the TapeTrack database folder (default install location C:\Program Files\TapeTrack\TapeTrack Framework Server\var\db)

Right click in the db folder and paste in snapshot files, select **Replace files** option to overwrite the files in the database.

Right click the log file log.0000000001 and select cut. Navigate to the folder var/dblogs, delete the current log file and paste in the one from your clipboard.

Start the service and open TapeMaster to check the database restore is correct.

If you have restored the database onto another computer system you will need to apply for a new license key
