# **Restricting Allowable Volume-ID's**

TapeTrack allows the creation of new volume-ID's to be restricted to a pattern specified in the Media-ID properties.

Volume-ID's can also be enforced to be unique for a Customer-ID or globally.

## **Restricting Volume-ID Patterns And Length**

Restricting volume-ID patterns can be enforced using TapeTrack string filters.

Character filters may be used alone or in combination to achieve the restricted volume-ID pattern required

### **Example Patterns**

Volume-ID required	Filter Pattern	<b>Example Volume-ID</b>
8 characters	???????	12345678
Any volume-ID ending with L6 suffix	*L6	12345678L6
8 characters ending in L generation suffix	??????L?	123456L5
8 characters ending in L generation suffix between 4 to 8 inclusive	??????L[4-8]	123456L5
8 characters, prefix AK, L generation suffix 4, 5, 6 or 7	AK????L[4-7]	AK2222L4

Any attempt to add a new volume with a non compliant volume-ID will cause an error and the process will be aborted.

#### **Restricting Customer And Global Duplicates**

Restricting Volume-ID's at a customer level ensures that a particular Volume-ID' can only exist once under a customer-ID throughout all media types.

Restricting Volume-ID's at a global level ensures that a particular Volume-ID can only exist once under all customer-ID's and media types.

Restricting customer and/or global duplicates is only recommended if you are the owner of the media.

Enforcing no global duplicates may stop you adding a customers inventory if the barcode values already exist for another customers media.

Enforcing no customer duplicates may stop you adding a customers inventory if the barcode values already exist for that customers other media types.

Enabling customer (Disallow Customer Duplicates) and/or global (Disallow Global Duplicates) duplicate restrictions can be done via the customer properties options tab in TapeTrack TapeMaster.
