

Setting Environmental Variables

The default behaviour of TapeTrack programs can be changed by setting environmental variables.

These variables can be set using the following methods.

Windows Command Line

```
set VARIABLE=VALUE
```

Where VARIABLE is the variable name, and VALUE is the variable value.

Linux Shell

To set an environmental variable in the Linux operating system, use the export command.

```
export VARIABLE=VALUE
```

Where VARIABLE is the variable name, and VALUE is the variable value.
