## **Setting Environmental Variables**

The default behaviour of TapeTrack programs can be changed by setting environmental variables.

These variables can be set using the following methods.

## **Windows Command Line**

```
set VARIABLE=VALUE
```

Where VARIABLE is the variable name, and VALUE is the variable value.

## **Linux Shell**

To set an environmental variable in the Linux operating system, use the export command.

```
export VARIABLE=VALUE
```

Where VARIABLE is the variable name, and VALUE is the variable value.

## **TapeTrack Config File**

The TapeTrack Config File that is loaded when each Desktop and Command Line Program is initiated, it can also be used to set environmental variables.

```
variables = {
   TMSSLEVELNAMES = "A,B,C";
   TMSSNOLEVELSLOT = "1";
};
```
