

# Home Slot

When Volumes are slotted by the Command Line Program [TMSS10SlotAllocation](#) the Slots assigned are determined by the Repository Options setting, either IntelliSlot or First Available.

Assigning a Volume with a Home Slot will have TMSS10SlotAllocation attempt to slot that Volume to its Home Slot first, if that Slot is unavailable the Volume will be Slotted according to the preset protocol.

## Assigning A Home Slot

To assign a Volume to a Home Slot, from the Inventory window in TapeMaster:

- Right click a Volume and select Properties
- Open the Options tab
- Expand the Home Locations
- In the Slot field, enter the required Home Slot number
- Click Save to update the data and close the Properties window.

Edit Volume: 000013L6

 If a Volume is Slotted in multiple Repositories (eg Offsite Vault and Racking), TMS10SlotAllocation will attempt to assign it to its Home Slot in all Repositories.
