

# Home Slot

When [Volumes](#) are Slotted by the Command Line Program

[\[\[cli:tmss10slotallocation\]TMSS10SlotAllocation](#) the Slots assigned are determined by the Repository Options setting, either [IntelliSlot](#) or First Available.

Assigning a [Volume](#) with a Home Slot will have [TMSS10SlotAllocation](#) attempt to slot that [Volume](#) to its Home Slot first, if that Slot is unavailable the [Volume](#) will be Slotted according to the pre-set protocol.

## Prerequisites

The required Repository must have an active [Zone assigned](#) with adequate Slots.

See:

- [Creating Zones](#)
- [Assigning Zones](#)

## Assigning A Home Slot

### Volume Already Slotted In Required Home Slot

If the [Volume](#) is already Slotted in (eg. Volume 000010L6), or assigned to the Slot (eg. Volume 000006L6), right click on the [Volume](#) and select Special Operations > Capture Home Slot.

Using this method you can set the Home Slot of one or multiple [Volumes](#) in the one operation.

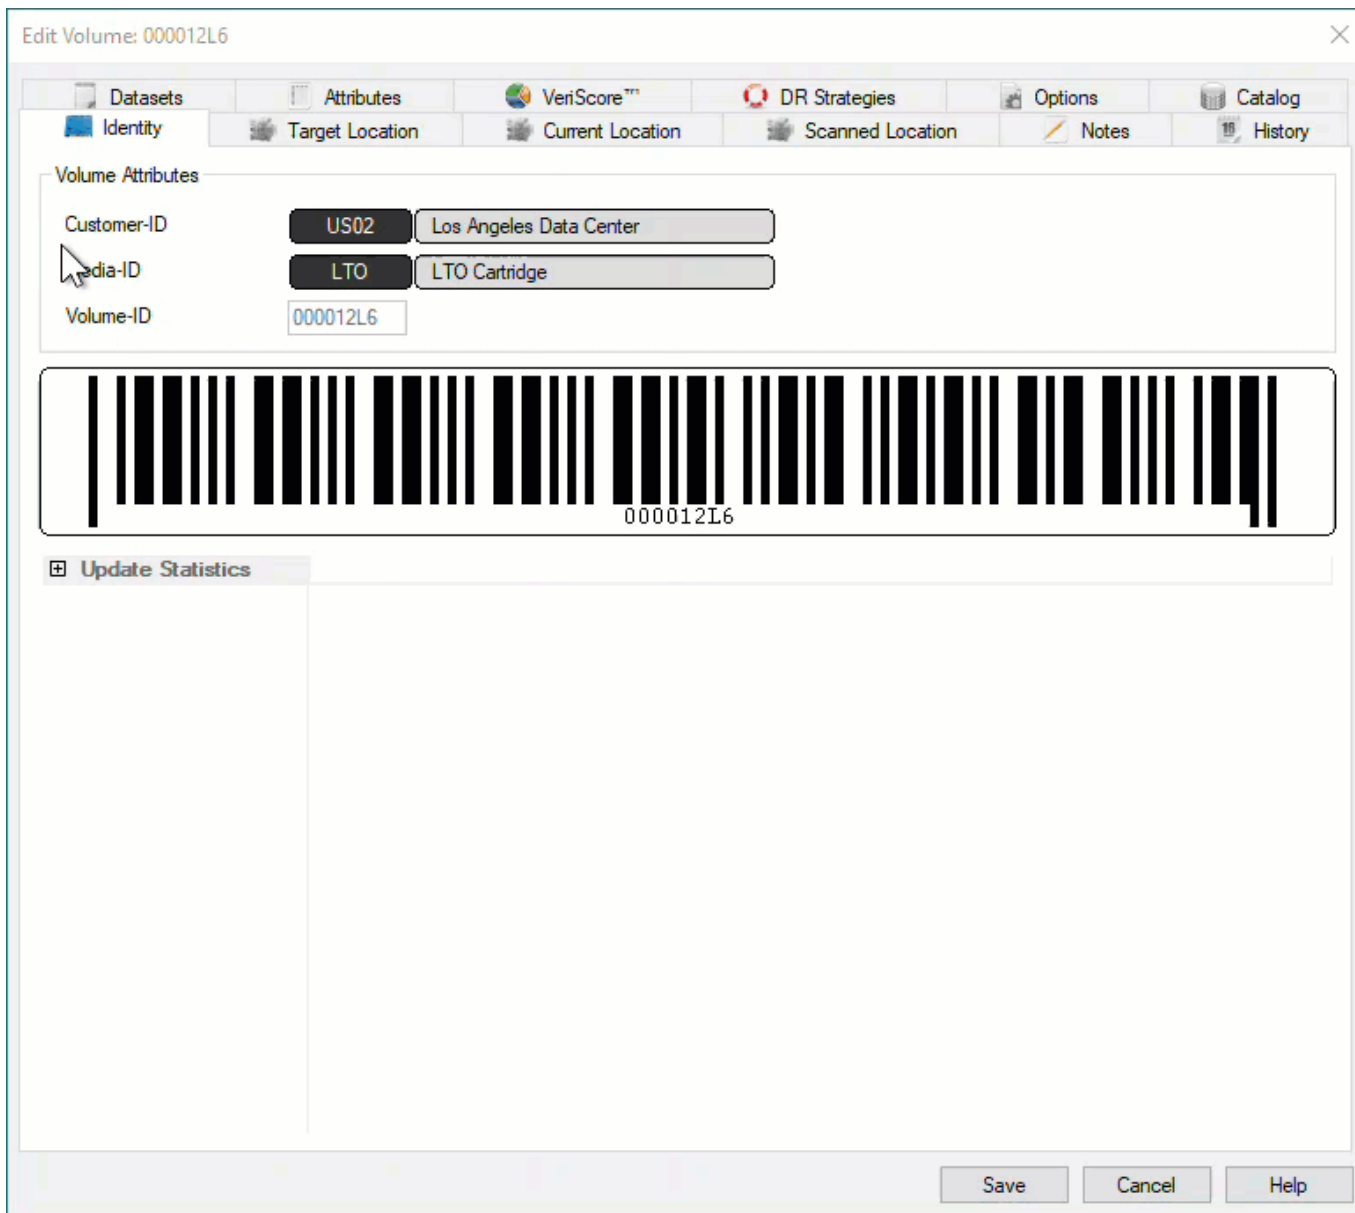

If you use this process with a **Volume** that is not Slotted or assigned to a Slot (eg. Volume 000012L6) the Home Slot will be set to zero (no Home Slot).

If you use this process on a **Volume** that already has a Home Slot, the Home Slot value will be set to the Current assigned Slot.

### Setting Home Slot Via Volume Properties

To assign a **Volume** to a Home Slot, from the Inventory window in TapeMaster:

- Right-click a **Volume** and select Properties.
- Select the Options tab.
- Expand the Home Locations by clicking the +.
- In the Slot field enter the required Home Slot number by using the incrementor arrows (eg. 3) or typing in the number (eg. 212).
- Click Save to update the data and close the Properties window.

 If a [Volume](#) is Slotted in multiple Repositories (eg Offsite Vault and Racking), [TMSS10SlotAllocation](#) will attempt to assign it to its Home Slot in all Repositories.

### Slotting Volumes In Home Slot Automatically

If `Restore Home Slot` is set to `True`, the [Volumes](#) will be placed in their Home Slot without the need to run `TMSS10SlotAllocation`.

To set `Restore Home Slot` right click the required Repository and select `Properties`.

Edit Repository: Offsite Vault

 Ensure each **Volume** has a unique Home Slot value. Assigning a Slot to more than one **Volume's** Home Slot value can result in multiple **Volumes** being Slotted in the one Slot.
