Troubleshooter: Deleting Volumes

The purpose of this troubleshooter is to diagnose why volumes in TapeTrack cannot be deleted.

To diagnose why you cannot delete volumes, select the error presented:

Security does not allow this operation

The error **Security does not allow this operation** indicates your user ID does not have sufficient access rights to delete volumes from TapeTrack.

To remove volumes from TapeTrack you will need to either:

- Have you administrator raise your access to include Alter rights.
- Have a user with **Alter** rights remove the volumes for you.

Last update: 2025/01/21 22:07

Actual Repository does not allow volume delete

The error **Actual Repository does not allow volume delete** indicates that the repository option **Allow deletes** is set to false. This option is set to false by default to limit the ability of accidental deletion of volumes.

It is best practice to keep **Allow Deletes** set to False unless in the actual process of deleting volumes. This keep a safe guard on accidental deletion during normal operation.

To enable volume deletion:

https://rtfm.tapetrack.com/ Printed on 2025/12/01 06:11

- Right click required repository and select Properties or double-click repository.
- Select Options tab.
- Set **Allow Deletes** to True for the required repository.
- Click Save to confirm alterations.
