

# Diagnosing Connection Problems

## Checked TapeTrack Service was running.

```
C:\WINDOWS\system32>sc query "TMSS10SVC"

SERVICE_NAME: TMSS10SVC
        TYPE               : 10    WIN32_OWN_PROCESS
        STATE                : 4     RUNNING
                                (STOPPABLE, NOT_PAUSABLE, IGNORES_SHUTDOWN)
        WIN32_EXIT_CODE       : 0      (0x0)
        SERVICE_EXIT_CODE    : 0      (0x0)
        CHECKPOINT           : 0x0
        WAIT_HINT            : 0x0
```

## Pinged with TMSS10Ping

```
C:\WINDOWS\system32>TMSS10Ping localhost
44 bytes from 127.0.0.1: seq=1 time=6.00 ms
44 bytes from 127.0.0.1: seq=2 time=0.00 ms
44 bytes from 127.0.0.1: seq=3 time=0.00 ms
44 bytes from 127.0.0.1: seq=4 time=0.00 ms

--- localhost TMSS10Ping statistics ---
4 packets transmitted
round-trip min/avg/max = 0.00/1.50/6.00 ms
```

## Checked TapeTrack was listening on port 5000.

```
netstat -abn | more
...
[svchost.exe]
  TCP    0.0.0.0:5000          0.0.0.0:0          LISTENING
[TMSS10Server.exe]
...
```

In this case:

1. The service was running.
2. TMSS10Ping was blocking (hanging)
3. TapeTrack was on port 5000,

which means it was up AND listening.

This is most definitely a firewall problem.

If you do not have access to change the Windows Firewall rules check with your Windows Admin team.
