

Diagnosing Connection Problems

Check TapeTrack Service is running.

Service is running.

```
C:\WINDOWS\system32>sc query "TMSS10SVC"

SERVICE_NAME: TMSS10SVC
    TYPE               : 10  WIN32_OWN_PROCESS
    STATE              : 4   RUNNING
                          (STOPPABLE, NOT_PAUSABLE, IGNORES_SHUTDOWN)
    WIN32_EXIT_CODE    : 0   (0x0)
    SERVICE_EXIT_CODE : 0   (0x0)
    CHECKPOINT        : 0x0
    WAIT_HINT         : 0x0
```

Service is not running.

```
C:\Users\diff1>sc query "TMSS10SVC"

SERVICE_NAME: TMSS10SVC
    TYPE               : 10  WIN32_OWN_PROCESS
    STATE              : 1   STOPPED
    WIN32_EXIT_CODE    : 0   (0x0)
    SERVICE_EXIT_CODE : 0   (0x0)
    CHECKPOINT        : 0x0
    WAIT_HINT         : 0x0
```

/code>

Attempt to [[server:start_stop|start the Framework Server]].
=====Ping with TMSS10Ping=====

Ping the TapeTrack Framework Server with TMSS10Ping, using localhost if run on the same server or the IP or DNS of the server if run from another computer.

```
<code>
C:\WINDOWS\system32>TMSS10Ping localhost
44 bytes from 127.0.0.1: seq=1 time=6.00 ms
44 bytes from 127.0.0.1: seq=2 time=0.00 ms
44 bytes from 127.0.0.1: seq=3 time=0.00 ms
44 bytes from 127.0.0.1: seq=4 time=0.00 ms

--- localhost TMSS10Ping statistics ---
4 packets transmitted
```

round-trip min/avg/max = 0.00/1.50/6.00 ms

Check TapeTrack is listening on port 5000.

```
netstat -abn | more
...
[svchost.exe]
  TCP      0.0.0.0:5000          0.0.0.0:0          LISTENING
[TMSS10Server.exe]
...
...
```

In this case:

1. The service was running.
2. TMSS10Ping was blocking (hanging).
3. TapeTrack was on port 5000, which means it was up and listening.

This is most definitely a Firewall problem.

If you do not have access to change the Windows Firewall rules check with your Windows Admin team.
