Troubleshooter: Slotting Not Previously Setup

Slotting is not setup to run by default, to enable slotting a number of setup tasks must be performed:

- 1. Slotting must be enabled in the options for the repository requiring slotting.
- 2. Zones must be assigned to the repository.
- 3. There must be a sufficient number of free slots available to accommodate every volume that currently requires a slot.
- 4. The slotting program must be called, either manually or via a scheduler such as Windows Scheduler or crond.
- 5. The slotting program must be called with the right arguments, including the right server name or address and valid credentials.
