

# Troubleshooter: Slotting (previously working)

## Was slotting setup to run automatically?

Slotting is usually setup to run automatically via Windows Scheduler or Crond, but sometimes people prefer to run it manually by running a script from the command line or double clicking on a bat file.

Was your slotting setup to run automatically?

## Why has your automatic slotting stopped?

There are several reasons why your automatic slotting may have stopped working:

1. Windows Scheduler has been setup to run the task using credentials that have expired or been revoked.
2. There is a problem with Windows Scheduler.
3. The Windows bat file that runs the slotting program has been moved, renamed or deleted.
4. The TapeTrack User-ID that the slotting program runs under has been revoked, deleted or the password has changed.
