

# TMSSCHOMP

The [Environmental Variable](#) TMSSCHOMP will remove the number of characters defined from the beginning of the extracted string.

TMSSCHOMP is usually used with programs such as TMSS10Page2CSV to trim unwanted characters from a page formatted report before outputting the results to a CSV report.

See [TMSS10Page2CSV](#) to see an example of TMSSCHOMP in creating a CSV report from a page formatted report.
