TMSSKERBEROS

By default TapeTrack Command Line programs use the ‑S argument to pass the User and password for authentication.

If a Windows Command Line program wishes to use the current Windows User and authenticate via Kerberos Single-Signon, the environmental variable TMSSKERBEROS should be set. The value of the environmental variable is not consequential.

> ⚠ This environmental variable is only available on the Microsoft Windows platform.

```
set TMSSKERBEROS=on
```

environmental variables
