

# TMSSKERBEROS

By default TapeTrack Command Line programs use the `-S` argument to pass the User and password for authentication.

If a Windows [Command Line program](#) wishes to use the current Windows User and authenticate via Kerberos Single-Signon, the [environmental variable](#) `TMSSKERBEROS` should be set. The value of the [environmental variable](#) is not consequential.

This [environmental variable](#) is only available on the Microsoft Windows platform.

```
set TMSSKERBEROS=on
```

[environmental variables](#), [logon](#), [connection](#)
