

TSSREPORTCOLUMNDELETE

This [environmental variable](#) TSSREPORTCOLUMNDELETE can be used to remove columns from a [Command Line Program](#) output.

To remove columns, set the variable to an array of comma delimited integers, each representing a column that you would like to remove.

The maximum integer number is 32. If the value exceeds the number of columns in the report, or if the value exceeds **32**, the integer is ignored.

The sequence of the array of integers is not important.

Example

To remove columns 3 and 4 use

```
<sxh>set TSSREPORTCOLUMNDELETE=3,4,<sxh>
```
