TMSSSERVERPROXY

The Environmental Variable TMSSSERVERPROXY tells the TapeTrack Communications API to tunnel all TapeTrack communications via a HTTP proxy.

The value of TMSSSERVERPROXY should be set in the format user:password@server:port, where:

- user (optional) is the user that will be connecting to the HTTP Proxy Server.
- password (optional) is the password of the user that is connecting to the HTTP Proxy Server.
- server (required) is the name or IP address of the HTTP Proxy Server.
- port (optional) is the TCP/IP port number of the HTTP Proxy Server.

When troubleshooting HTTP Proxy connections, you should consider using the TMSSAPLILOGDIR environmental variable.

Example

set TMSSSERVERPROXY=jsmith:password@192.168.1.8:3128
